#### MSRA @ ILSVRC & COCO 2015 Competitions

- 1st places in all five main tracks
  - ImageNet Classification: "Ultra-deep" (quote Yann) 152-layer nets
  - ImageNet Detection: 16% better than 2nd
  - ImageNet Localization: 27% better than 2nd
  - COCO Detection: 11% better than 2nd
  - COCO Segmentation: 12% better than 2nd

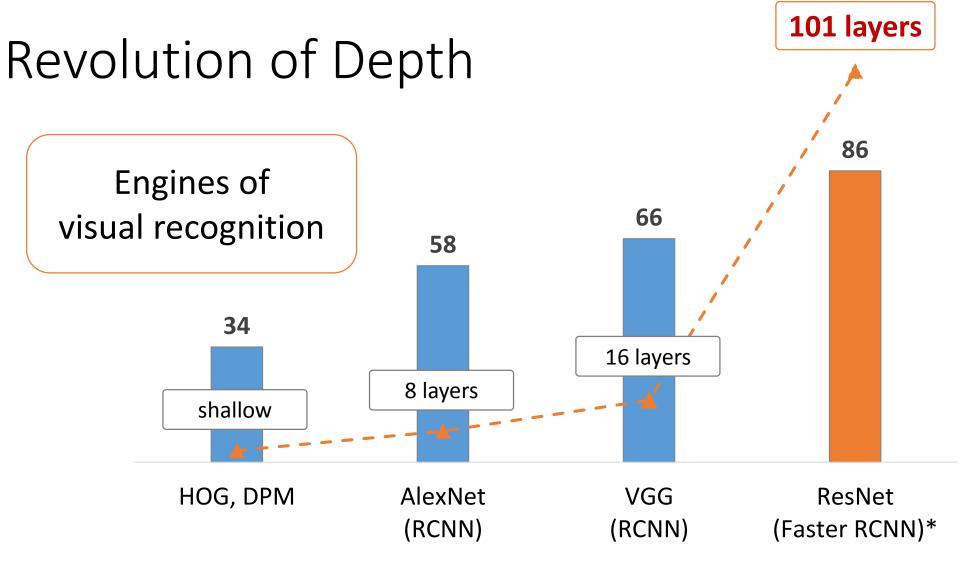

ImageNet Classification top-5 error (%)

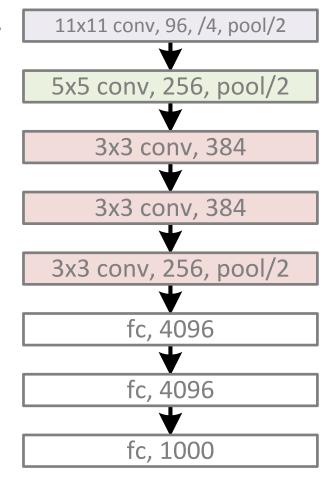

PASCAL VOC 2007 Object Detection mAP (%)

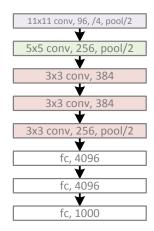

AlexNet, 8 layers (ILSVRC 2012)

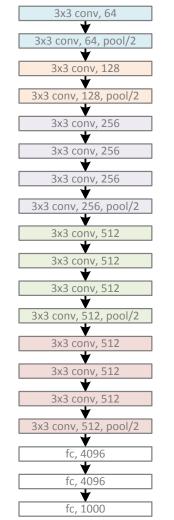

AlexNet, 8 layers (ILSVRC 2012)

VGG, 19 layers (ILSVRC 2014)

GoogleNet, 22 layers (ILSVRC 2014)

AlexNet, 8 layers (ILSVRC 2012)

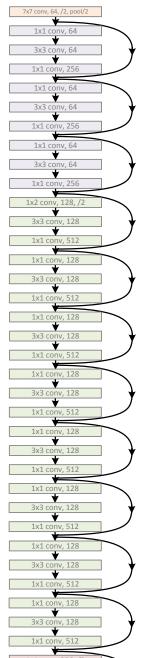

VGG, 19 layers (ILSVRC 2014)

ResNet, 152 layers (ILSVRC 2015)

# Is learning better networks as simple as stacking more layers?

#### Simply stacking layers?

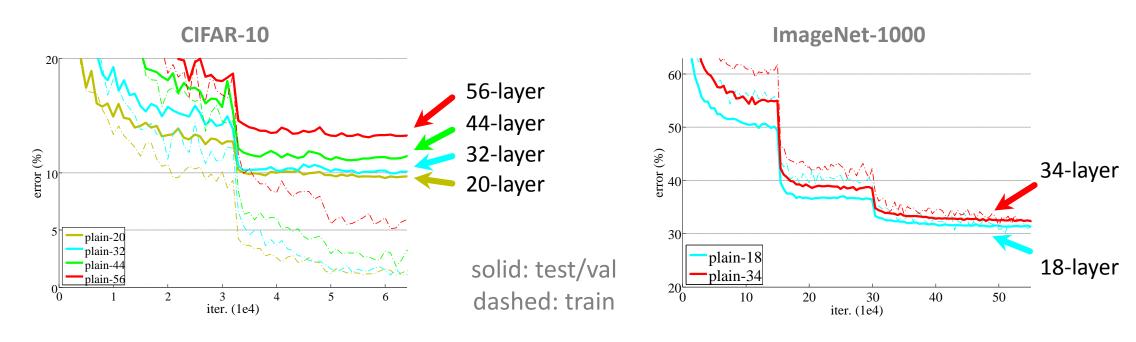

- Plain nets: stacking 3x3 conv layers...
- 56-layer net has higher training error and test error than 20-layer net

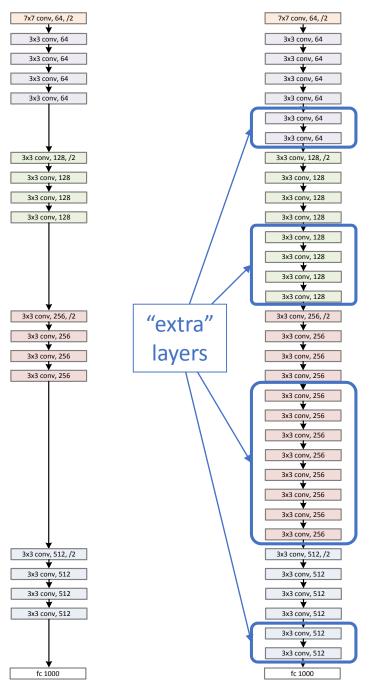

#### Simply stacking layers?

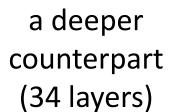

- "Overly deep" plain nets have higher training error
- A general phenomenon, observed in many datasets

a shallower model (18 layers)

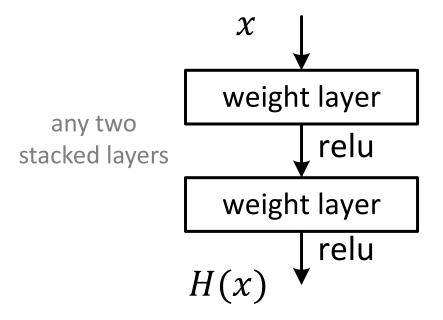

- A deeper model should not have higher training error
- A solution *by construction*:
  - original layers: copied from a learned shallower model
  - extra layers: set as identity
  - at least the same training error
- Optimization difficulties: solvers cannot find the solution when going deeper...

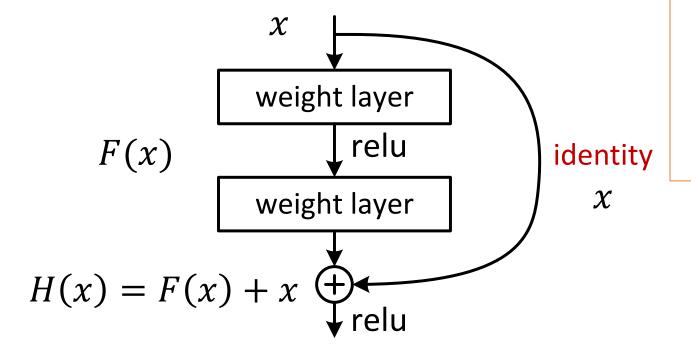

Plaint net

H(x) is any desired mapping, hope the 2 weight layers fit H(x)

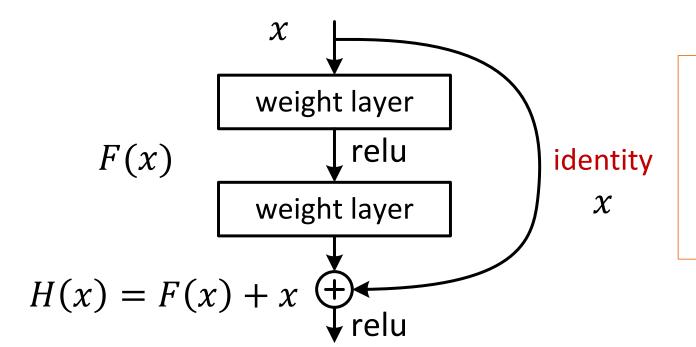

Residual net

H(x) is any desired mapping, hope the 2 weight layers fit H(x)hope the 2 weight layers fit F(x)let H(x) = F(x) + x

• F(x) is a residual mapping w.r.t. identity

- If identity were optimal, easy to set weights as 0
- If optimal mapping is closer to identity, easier to find small fluctuations

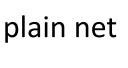

#### Related Works – Residual Representations

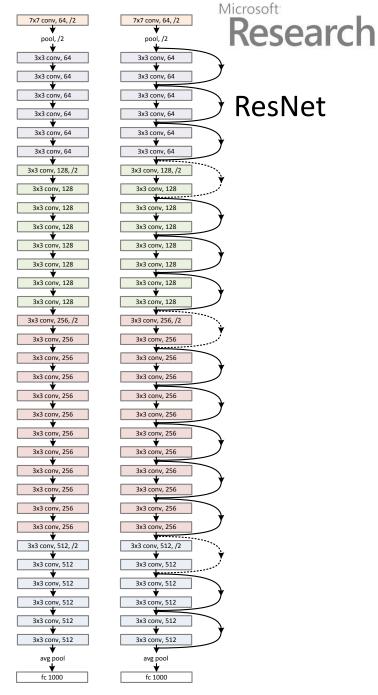

- VLAD & Fisher Vector [Jegou et al 2010], [Perronnin et al 2007]
  - Encoding residual vectors; powerful shallower representations.
- Product Quantization (IVF-ADC) [Jegou et al 2011]
  - Quantizing residual vectors; efficient nearest-neighbor search.
- MultiGrid & Hierarchical Precondition [Briggs, et al 2000], [Szeliski 1990, 2006]
  - Solving residual sub-problems; efficient PDE solvers.

#### Network "Design"

- Keep it simple
- Our basic design (VGG-style)
  - all 3x3 conv (almost)
  - spatial size /2 => # filters x2
  - Simple design; just deep!
- Other remarks:
  - no max pooling (almost)
  - no hidden fc
  - no dropout

#### Training

All plain/residual nets are trained from scratch

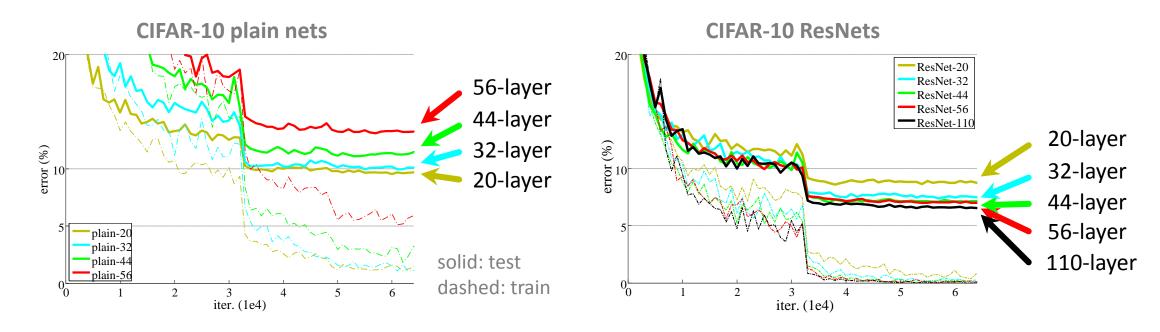

All plain/residual nets use Batch Normalization

Standard hyper-parameters & augmentation

#### CIFAR-10 experiments

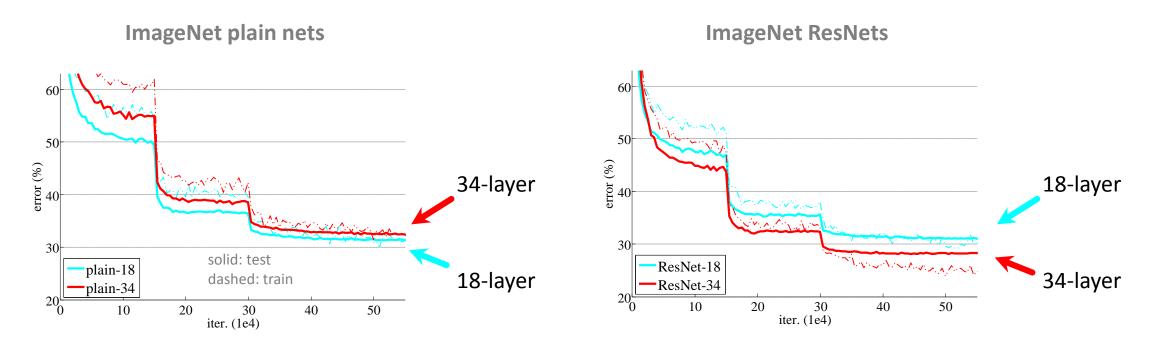

- Deep ResNets can be trained without difficulties
- Deeper ResNets have lower training error, and also lower test error

#### ImageNet experiments

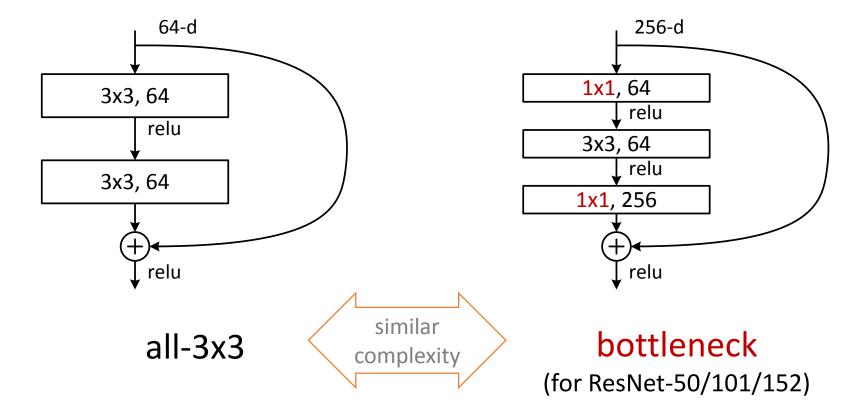

- Deep ResNets can be trained without difficulties
- Deeper ResNets have lower training error, and also lower test error

#### ImageNet experiments

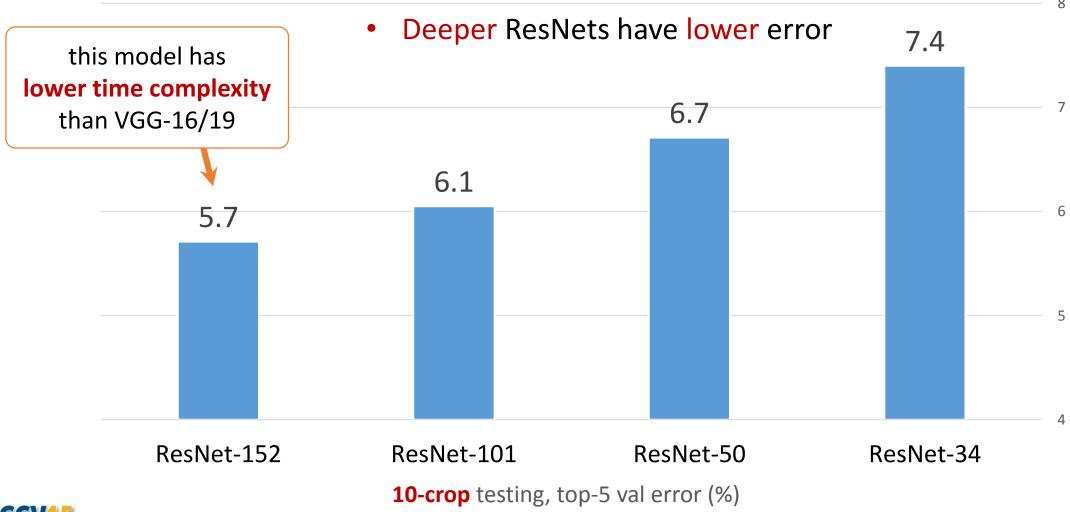

A practical design of going deeper

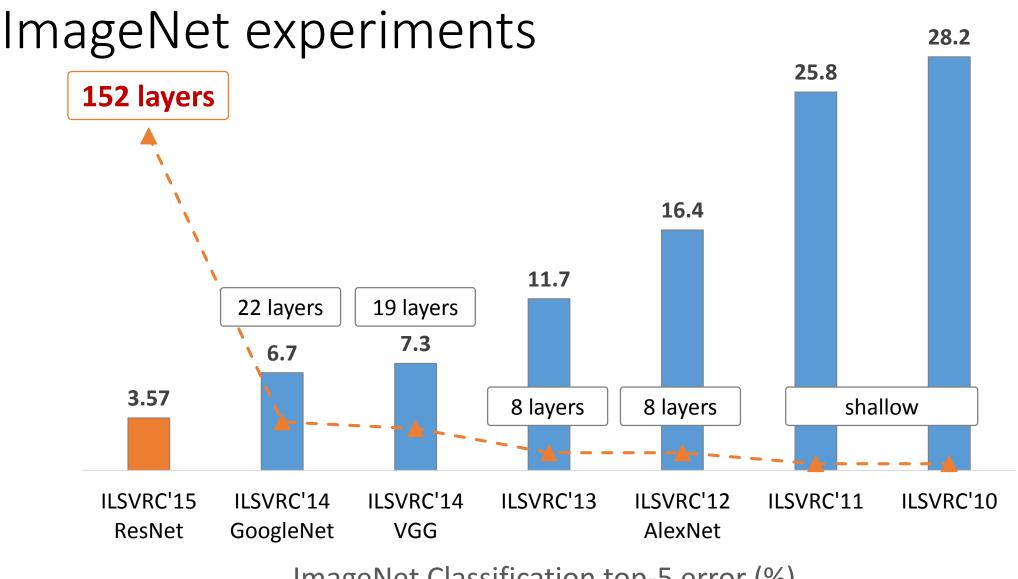

#### ImageNet experiments

ImageNet Classification top-5 error (%)

## Just classification?

A treasure from ImageNet is on learning features.

#### "Features matter." (quote [Girshick et al. 2014], the R-CNN paper)

| task                                | 2nd-place<br>winner | MSRA       | margin<br>(relative) |
|-------------------------------------|---------------------|------------|----------------------|
| ImageNet Localization (top-5 error) | 12.0                | 9.0        | 27%                  |
| ImageNet Detection (mAP@.5)         | 53.6 abs<br>8.5%    | olute 62.1 | 16%                  |
| COCO Detection (mAP@.5:.95)         | 33.5                | 37.3       | 11%                  |
| COCO Segmentation (mAP@.5:.95)      | 25.1                | 28.2       | 12%                  |

- Our results are all based on ResNet-101
- Our features are well transferrable

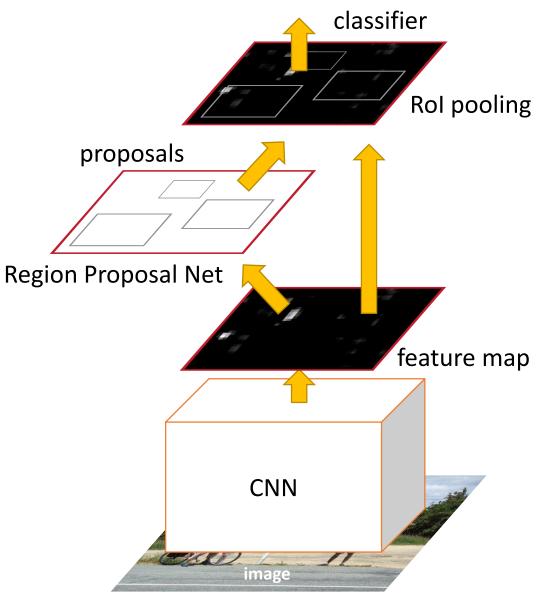

#### Object Detection (brief)

Simply "Faster R-CNN + ResNet"

| Faster R-CNN<br>baseline | mAP@.5 | mAP@.5:.95 |
|--------------------------|--------|------------|
| VGG-16                   | 41.5   | 21.5       |
| ResNet-101               | 48.4   | 27.2       |

**COCO detection results** 

(ResNet has 28% relative gain)

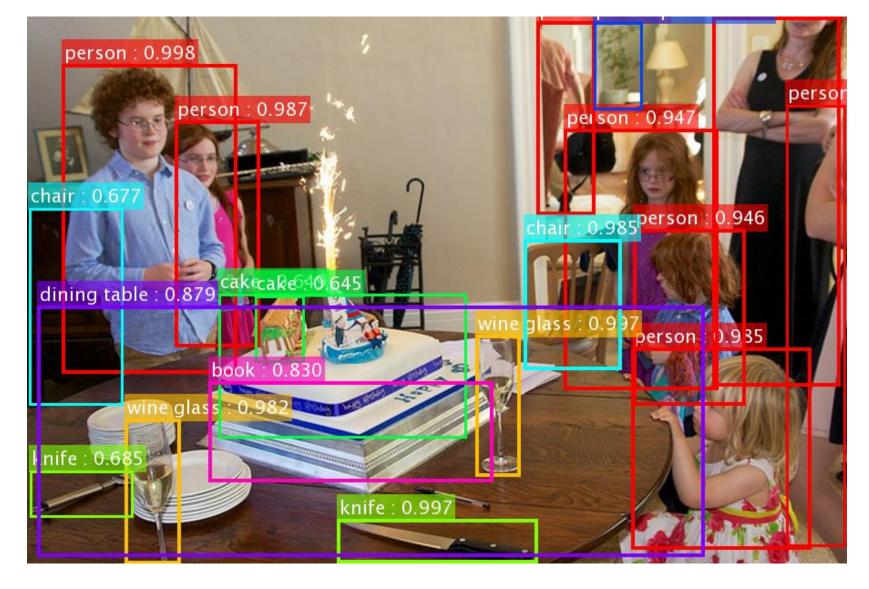

#### Object Detection (brief)

- RPN learns proposals by extremely deep nets
  - We use only 300 proposals (no SS/EB/MCG!)
- Add what is just missing in Faster R-CNN...
  - Iterative localization
  - Context modeling
  - Multi-scale testing
- All are based on CNN features; all are end-to-end (train and/or inference)
- All benefit more from deeper features cumulative gains!

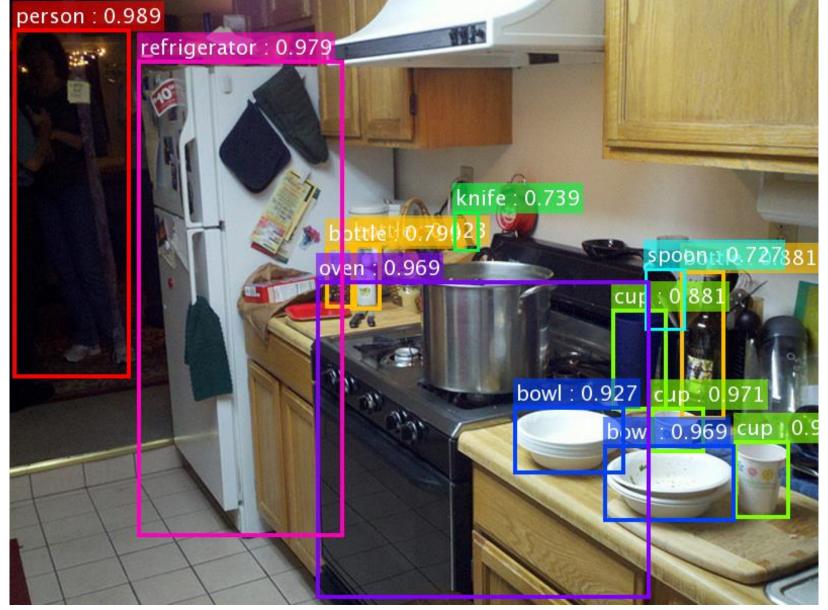

#### Our results on COCO – too many objects, let's check carefully!

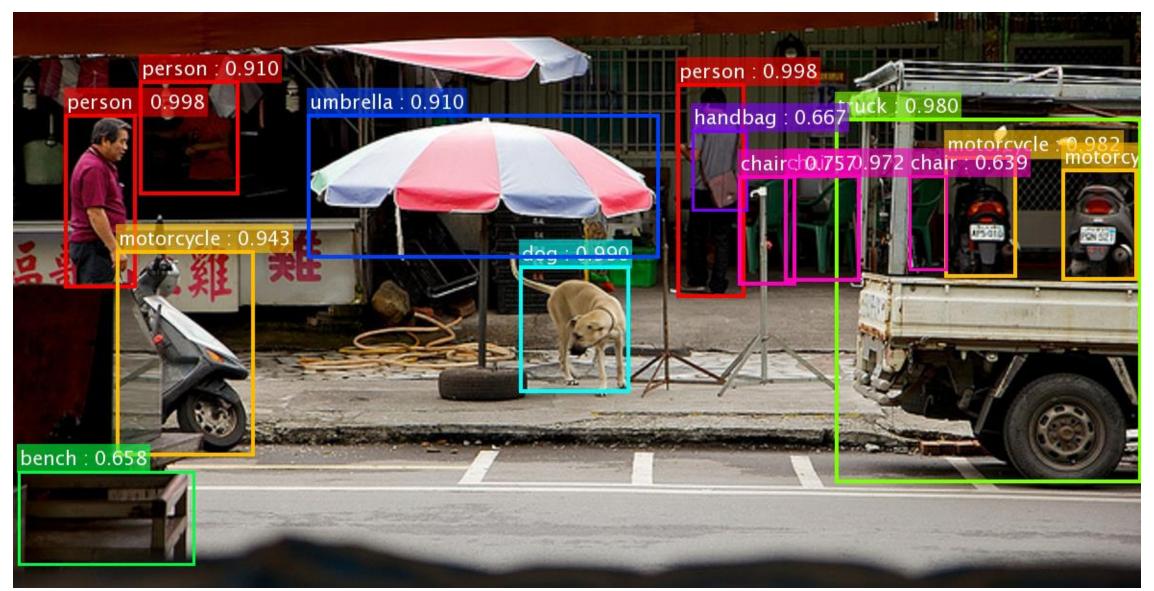

\*the original image is from the COCO dataset

\*the original image is from the COCO dataset

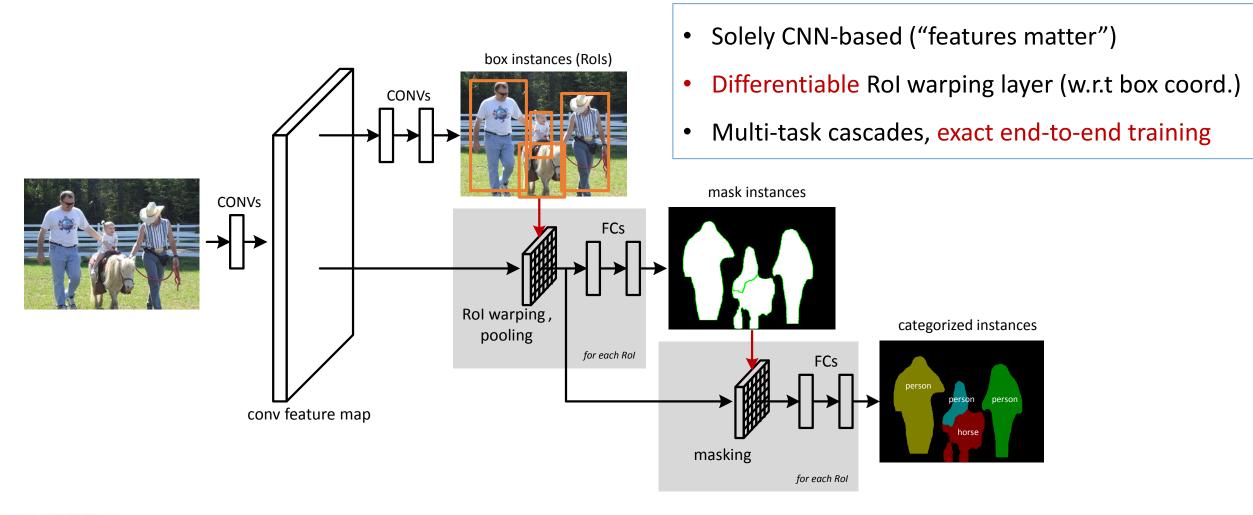

\*the original image is from the COCO dataset

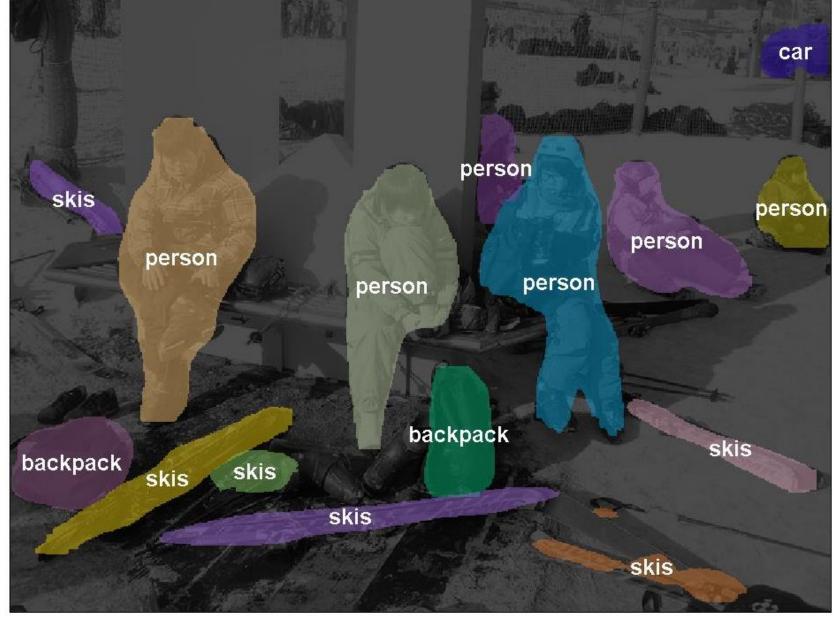

#### Instance Segmentation (brief)

input

#### Conclusions

Deeper is still better

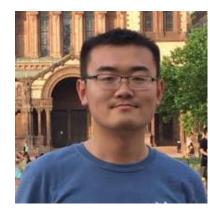

"Features matter"!

Faster R-CNN is just amazing
